ROLE

Context overload

F FLUX CASE STUDY

The average PM switches between 7 tools per day. Each switch costs cognitive bandwidth and creates coordination gaps.

The handoff gap

Engineers say 61% of Figma specs they receive don't match what ultimately gets merged into production.

Strategy drift

Only 29% of engineers know the "why" behind the ticket they're currently building without opening a separate doc.

# Research methodology

A 6-week mixed-methods sprint: semi-structured interviews, diary studies, and a quantitative survey (n=214). Goal: map the exact moments where coordination overhead breaks down.

- Contextual interviews n=18 60-90 min
- Diary study participants n=12 2 weeks
- Survey respondents n=214 Async

73%

use 5+ tools daily

2.4h

lost to context-switching per day

61%

say design specs are stale

82%

disable notifications weekly

KEY FINDINGS

COMPETITIVE MATRIX

DESIGN-ENG

### The handoff gap

Engineers say specs drift after design review. 61% say the Figma file they receive doesn't match what gets merged.

PROCESS

### Meeting overhead

Teams with poor async tooling hold 6.4 syncs per sprint (×45 min each). The drag is visible in every velocity chart.

COMM

F

Notification fatigue

FLUX CASE STUDY

82% of PMs disable Slack notifications weekly. Signal-to-noise across tools creates learned helplessness.

ALIGNMENT

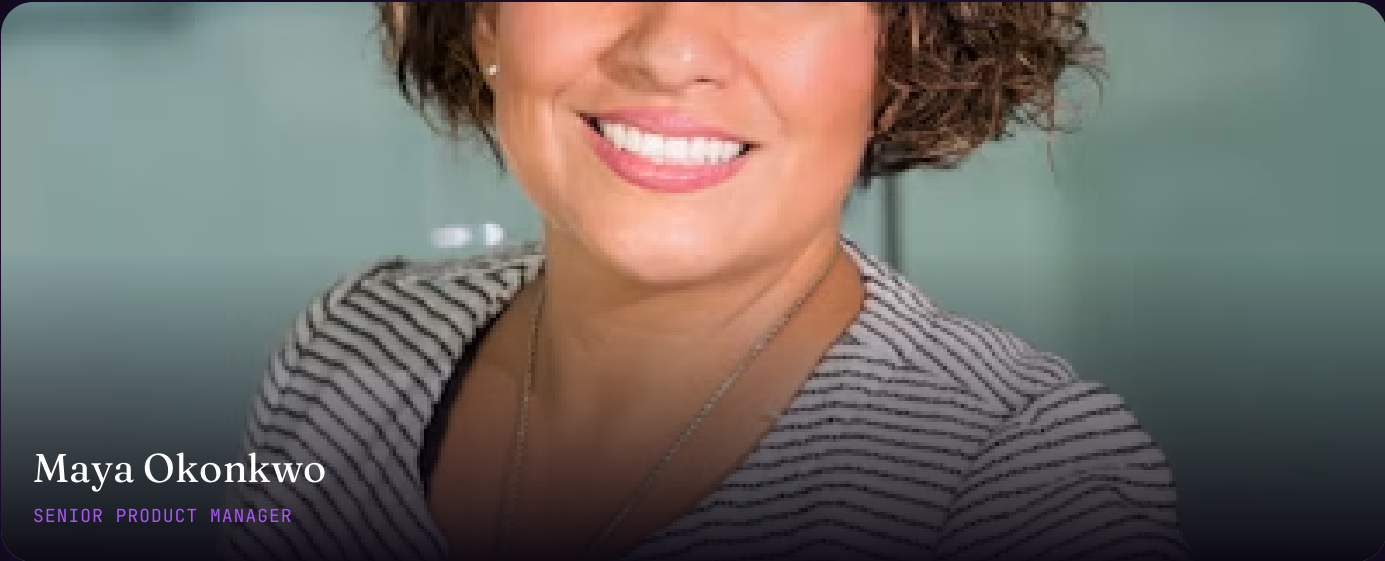

Strategy invisibility

Only 29% of engineers know the "why" behind their current ticket without opening a separate document.

| DAILY TOOLS |            |

"I need one place where strategy and execution aren't ten clicks apart."

GOALS

- Ship features faster
- Cut status meeting overhead
- Align eng & design

FRUSTRATIONS

- ✗ Context-switching between tools
- ✗ Stale roadmap docs
- ✗ Missing notifications

DESIGN IMPLICATION

Surface roadmap progress at a glance. Reduce clicks to status without a separate doc. Prioritise the weekly digest view.

## ✦ WHAT WORKED

- ✓ Single-pane ticket + spec view
- ✓ Command palette discoverability
- ✓ PR ↔ ticket auto-linking
- ✓ Async digest notifications

## ↻ WHAT WE CHANGED

- ✓ Removed inline Figma editor
- ✓ Replaced sidebar with top rail on mobile
- ✓ Added "why" field to ticket templates
- ✓ Made sprint assignment optional

## → NEXT STEPS

- ✓ AI-generated ticket summaries
- ✓ Org-wide roadmap read view
- ✓ Slack thread ↔ ticket sync
